Evaluate the following SQL statement:

```
ALTER TABLE emp
DROP COLUMN first_name;
```

Which two statements are true regarding the above command? (Choose two.)

A. The FIRST_NAME column would be dropped provided it does not contain any data.
B. The FIRST_NAME column would be dropped provided at least one or more columns remain in

```
EMP
Name      Null?  Type
EMPNO     NOT NULL NUMBER(4)
FIRST_NAME VARCHAR2(20)
LAST_NAME VARCHAR2(20)
SALARY    NUMBER(10,2)
DEPTNO    NUMBER(2)
```
C. The FIRST_NAME column can be rolled back provided the SET UNUSED option is added to the above SQL statement.
D. The FIRST_NAME column can be dropped even if it is part of a composite PRIMARY KEY provided the CASCADE option is used.

Correct Answers: B D

3: View the Exhibit and examine the structure of the EMP table.
You executed the following command to add a primary key to the EMP table:

```
ALTER TABLE emp
ADD CONSTRAINT emp_id_pk PRIMARY KEY (emp_id)
USING INDEX emp_id_idx;
```

A. The PRIMARY KEY is created along with a new index.
B. The PRIMARY KEY is created and it would use an existing unique index.
C. The PRIMARY KEY would be created in a disabled state because it is using an existing index.
D. The statement produces an error because the USING clause is permitted only in the CREATE TABLE command.

Correct Answers: B

4: View the Exhibit and examine the structure of the ORDERS table:
The ORDER_ID column has the PRIMARY KEY constraint and CUSTOMER_ID has the NOT NULL constraint.
No default values have been specified for any of the columns.
Evaluate the following statement:

```
INSERT INTO (SELECT order_id, order_date, customer_id
FROM ORDERS
WHERE order_total = 1000
WITH CHECK OPTION)
VALUES (13, SYSDATE, 101);
```

What would be the outcome of the above INSERT statement?
A. It would execute successfully and the new row would be inserted into a new temporary table created by the subquery.
B. It would execute successfully and the ORDER_TOTAL column would have the value 1000 inserted automatically in the new row.
C. It would not execute successfully because the ORDER_TOTAL column is not specified in the SELECT list and no value is provided for it.
D. It would not execute successfully because all the columns from the ORDERS table should have been included in the SELECT list and values should have been provided for all the columns.

Correct Answers: C
