Vendor: Microsoft

Exam Code: 70-243

Exam Name: Administering and Deploying System Center 2012 Configuration Manager

Version: DEMO
QUESTION 1
You recently migrated from System Center Configuration Manager 2007 to System Center 2012 Configuration Manager. Your network contains a client computer that runs the 64-bit version of Windows 7 and the 32-bit version of Windows 7. Some client computers have the Microsoft Application Virtualization (App-V) client installed. You have an Application named App1. You have a 64-bit version of App1, a 32-bit version of App1, and a virtual version of App1. You need to deploy the Application to all of the client computers. The solution must minimize the amount of administrative effort. What should you do?

A. Create a new Application that has three different deployment types and create a target collection for each of the deployment types.
B. Create a new Application that has three different deployment types and configure global conditions for each of the deployment types.
C. Create a new package for each version of App1.
D. Create a new Application for each version of App1.

Answer: A

QUESTION 2
You have an Application named App1. You need to ensure that users in the finance department can install App1 by using the Application Catalog. What should you do?

A. Create a required user deployment and target the deployment to all of the finance department users.
B. Create a required user deployment and target the deployment to all of the client computers in the finance department.
C. Create an available user deployment and target the deployment to all of the finance department users.
D. Create an available user deployment and target the deployment to all of the client computers in the finance department.

Answer: C

QUESTION 3
Your company uses System Center 2012 Configuration Manager with Microsoft Forefront Endpoint Protection integration. You deploy Forefront Endpoint Protection to all client computers. The company uses a management Application named App1. You discover that Forefront Endpoint Protection blocks App1. You need to ensure that App1 can run. How should you configure the Default Client Malware Policy? (Each correct answer presents a complete solution. Choose two.)

A. Create a software restriction policy.
B. Add a process exclusion.
C. Add a file location exclusion.
D. Modify the schedule scan settings.
E. Click the Use behavior monitoring check box.

Answer: CE

QUESTION 4
Your network contains a System Center 2012 Configuration Manager environment. You deploy a Microsoft Office 2007 package to all client computers by using Configuration Manager. Your
company purchases Office 2010. You need to ensure that all users can install Office 2010 from the Application Catalog. What should you do?

A. Deploy a new package for Office 2010.
B. Deploy Office 2010 by using a Group Policy Object (GPO).
C. Update the Office 2007 source file and redeploy the package.
D. Deploy a new Application for Office 2010.

Answer: D

QUESTION 5
You deploy Windows 7 by using Operating System Deployment (OSD). The development task sequence contains steps to install software updates and Applications. The amount of time required to deploy the Windows 7 image has increased significantly during the last six months. You need to recommend a solution to reduce the amount of time it takes to deploy the image. What should you recommend?

A. Synchronize software updates before deploying the image.
B. Use offline servicing for the image.
C. Create a new automatic deployment rule.
D. Add an additional Install Software Updates task sequence step to the deployment task sequence.

Answer: B

QUESTION 6
You have Windows 7 .images that are rebuilt quarterly and sported to System Center 2012 Configuration Manager. The Microsoft Deployment Toolkit (MDT) 2012 is integrated with Configuration Manager. You need to reduce the network security risks when the images are deployed by using Operating System Deployment (OSD). What should you do? (Choose all that apply.)

A. After the Apply Operating System Image task sequence step, add a step to install software updates offline.
B. Before the Apply Operating System image task sequence step, add a step to install Deployment Imaging Servicing and Management (DISM).
C. After the installation of the final Application, add an Install Software Updates task sequence step.
D. After the Apply Operating System Image task sequence step, add a Run Command line step that runs wuaudt.exe /detectnow
E. Before the Apply Operating System image task sequence step, add a step to install the Windows Automated Installation Kit (Windows AIK).

Answer: AB

QUESTION 7
Your company uses System Center 2012 Configuration Manager to distribute operating system images. The standard operating system for client computers is Windows 7 Enterprise (x86). You receive 300 new desktop computers. Each computer has a new storage controller. When you attempt to deploy an existing image to one of the computers, you receive an error message indicating that a storage device cannot be found during the pre-boot deployment phase. You need to ensure that you can deploy Windows 7 to the new computers by using an image. What should
you do?

A. Import the storage drivers to the Drivers container and update the task sequence.
B. Create a new x64 boot image and configure the operating system image to use the x64 boot image.
C. Create a new driver package and update the task sequence.
D. Update the existing x86 boot image to include the storage drivers.

Answer: A

QUESTION 8
Your network contains a System Center 2012 Configuration Manager environment. You plan to create a build and capture a task sequence to build a reference image of Windows 7. You need to identify which Application must exist in Configuration Manager before you can create the build and capture the task sequence. Which Applications should you identify? (Choose all that apply.)

A. Microsoft Deployment Toolkit (MDT)
B. Configuration Manager client
C. System Preparation tool (Sysprep)
D. User State Migration Tool (USMT)

Answer: C
