Vendor: Microsoft

Exam Code: 70-416

Exam Name: Implementing Desktop Application Environments

Version: Demo
QUESTION 1
Your company has a main office and 10 branch offices. Each branch office connects to the main office by using a low-bandwidth WAN link. All servers run Windows Server 2012. All client computers run Windows 8. You plan to deploy 20 new line-of-business applications to all of the client computers. You purchase 5,000 client licenses for the line-of-business applications. You need to recommend an application distribution solution. The solution must be able to meet the following requirements:

- Download application installation files from a server in the local site.
- Generate reports that contain information about the installed applications.
- Generate administrative alerts when the number of installed applications exceeds the number of purchased licenses.

What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer.

A. Applications published as RemoteApp programs.
B. Assigned applications by using Group Policy objects (GPOs).
C. Applications deployed by using Microsoft System Center 2012 Configuration Manager.
D. Published applications by using Microsoft Application Virtualization (App-V) publishing servers.

Correct Answer: C

QUESTION 2
Your company has a main office and two branch offices. The branch offices connect to the main office by using a slow WAN link. You plan to deploy applications to all of the offices by using Microsoft Application Visualization (App-V) 5.0 streaming. You need to recommend the server placement for the planned infrastructure. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

A. In the main office, deploy a management server, a database server, and a publishing server. In the branch offices, deploy a publishing server.
B. In the main office, deploy a database server and a publishing server. In the branch offices, deploy a management server, a database server, and a publishing server.
C. In the main office, deploy a management server, a database server, and a publishing server. In the branch offices, deploy a database server.
D. In each office, deploy a management server, a database server, and a publishing server.

Correct Answer: A
QUESTION 3
Your network contains an Active Directory domain named contoso.com. The domain contains 500 client computers that run Windows 8. You plan to deploy two applications named App1 and App2 to the client computers. App2 is updated by the application manufacturer every month. You need to recommend an application distribution strategy for the applications. The solution must meet the following requirements:

- The executable files of App1 must NOT be stored on the client computers.
- Users who run App2 must run the latest version of App2 only.

What should you recommend using to deploy the applications?

A. Microsoft Application Virtualization (App-V) in streaming mode.
B. A Group Policy software distribution package that is published to the user accounts.
C. Windows XP Mode.
D. A Group Policy software distribution package that is assigned to the user accounts.

Correct Answer: A

QUESTION 4
Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2012. All client computers run Windows 8. The domain contains a Remote Desktop Services (RDS) infrastructure and a Microsoft Application Visualization (App-V) infrastructure. Domain users use version 1.0 of a third-party application named Appl. Version 2.0 of App1 is released. Version 1.0 and version 2.0 cannot be installed on the same client computer. You need to recommend a solution to ensure that the users can run both versions of App1 simultaneously. The solution must meet the following requirements:

- Provide users with the ability to run App1 while they are disconnected from the corporate network.
- Minimize the amount of disk space required.

What should you include in the recommendation?

A. Use App-V to sequence and publish version 2.0 of App1.
B. Publish version 2.0 of App1 as a RemoteApp program.
C. Create a shim for version 2.0 of App1 by using the Microsoft Application Compatibility Toolkit (ACT).
D. Deploy version 2.0 of App1 on a virtual machine on the client computers.

Correct Answer: A
QUESTION 5
You plan to deploy virtual desktops to the network. All of the virtual desktops will be based on a virtual machine template named Templatel.vhd. Templatel.vhd contains an application named Appl. You plan to deploy an update to App1 named Applupdate.msp. You need to recommend the appropriate deployment method to apply Applupdate.msp to Templatel.vhd. You want to achieve this goal by using the minimum amount of administrative effort. Which deployment method should you recommend?

A. Run dism.exe and specify the /mount-w\rr\ parameter and the /add-package parameter.
B. Start a virtual machine that uses Templatel.vhd. Install Applupdate.msp, and then generalize the virtual machine,
C. Mount Templatel.vhd, and then copy Applupdate.msp to the %Systemroot%\AppPatch folder.
D. Run diskpart.exe and specify the attach parameter. Run msiexec.exe and specify the /update parameter.

Correct Answer: B

QUESTION 6
Your network contains multiple servers that run Windows Server 2012. The network contains a Windows Server Update Services (WSUS) infrastructure. On a server named Server1, you create and deploy images by using Microsoft Deployment Toolkit (MDT) 2012. You need to recommend a solution to ensure that the available updates are applied during the deployment of the image. What should you do?

A. From the WSUS Administration console, configure the personalization settings, and then create a computer group.
B. From Server1, edit the task sequence, and then modify the Customsettings.ini file.
C. From the WSUS Administration console, configure the personalization settings, and then configure the classifications.
D. From Server1, edit the task sequence, and then modify the Bootstrap.ini file.

Correct Answer: B

QUESTION 7
Your network contains an Active Directory domain named contoso.com. Client computers run either Windows 7 or Windows 8. You plan to replace the client computers that run Windows 7. You need to migrate the application settings and the configurations from the client computers that run Windows 7 to the client computers that run Windows 8. What should you do?

A. On the client computers that run Windows 7, run loadstate.exe. On the client computers that run Windows 8, run scanstate.exe.
B. On the client computers that run Windows 7, run scanstate.exe. On the client computers that
run Windows 8, run loadstate.exe.

Correct Answer: B

**QUESTION 8**
Your company has offices in France and England. The network contains an Active Directory domain named contoso.com. You plan to deploy Microsoft Word 2010 to all users by using Group Policy objects (GPOs). The users in the office in France must receive a version of Word that contains custom options. You need to recommend a solution for the planned deployment of Word. What should you include in the recommendation?

A. Application control policies  
B. A Windows Installer transform (.mst) file  
C. Software restriction policies  
D. A Windows Installer patch (.msp) file

Correct Answer: B

**QUESTION 9**
Your network contains an Active Directory domain named contoso.com. The domain contains five servers that run Windows Server 2012 and 500 client computers that run Windows 7. You deploy five third-party applications named App1, App2, App3, App4, and App5 to 50 of the client computers. You need to recommend an application update solution for the third-party applications. The solution must ensure that an administrator can generate reports that contain installation information. What should you recommend implementing? More than one answer choice may achieve the goal. Select the BEST answer.

A. Windows Server Update Services (WSUS)  
B. Windows Intune  
C. Assigned applications by using Group Policy  
D. Microsoft System Center 2012 Configuration Manager

Correct Answer: D
QUESTION 10
Your company plans to implement a monitoring solution for application licenses. The corporate management policy states that all newly deployed technologies must be cloud-based. You need to recommend a license monitoring solution that meets the management policy. Which license monitoring solution should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

A. The Microsoft Asset Inventory Service (AIS)
B. Asset Intelligence in Microsoft System Center 2012 Configuration Manager
C. The Microsoft License Statement tool
D. The Microsoft Assessment and Planning (MAP) Toolkit

Correct Answer: A

QUESTION 11
You have a virtual infrastructure. The infrastructure contains servers that run Windows Server 2012 and have Microsoft Application Virtualization (App-V) 5.0 installed. You sequence an application named App1, and then assign App1 by using a Group Policy object (GPO) named GPO1. The manufacturer of App1 releases an update named Updateapp1.msi. You need to deploy the updated version of App1 to all of the App-V 5.0 clients. The solution must ensure that all of the App-V 5.0 clients only run the updated version of App1. What should you do?

A. Create a new GPO, and then assign Updateapp1.msi.
B. From the App-V Sequencer, sequence Updateapp1.msi, and then create a new GPO.
C. From the App-V Sequencer, update App1.appv, and then modify the GPO.
D. Create a new GPO, and then publish Updateapp1.msi.

Correct Answer: B
