Vendor: Microsoft

Exam Code: 70-640

Exam Name: TS: Windows Server 2008 Active Directory, Configuring

Version: DEMO
QUESTION 1
You install a standalone root certification authority (CA) on a server named Server1.
You need to ensure that every computer in the forest has a copy of the root CA certificate installed in the local computer's trusted root certification authorities store.
Which command should you run on Server1?

A. `certreq.exe` and specify the `-accept` parameter
B. `certreq.exe` and specify the `-retrieve` parameter
C. `certutil.exe` and specify the `-dpublish` parameter
D. `certutil.exe` and specify the `-importcert` parameter

Answer: C

QUESTION 2
Your network contains an Active Directory forest. The forest contains two domains. You have a standalone root certification authority (CA). On a server in the child domain, you run the Add Roles Wizard and discover that the option to select an enterprise CA is disabled.
You need to install an enterprise subordinate CA on the server.
What should you use to log on to the new server?

A. an account that is a member of the Certificate Publishers group in the child domain
B. an account that is a member of the Certificate Publishers group in the forest root domain
C. an account that is a member of the Schema Admins group in the forest root domain
D. an account that is a member of the Enterprise Admins group in the forest root domain

Answer: D

QUESTION 3
You have an enterprise subordinate certification authority (CA).
You have a group named Group1.
You need to allow members of Group1 to publish new certificate revocation lists. Members of Group1 must not be allowed to revoke certificates.
What should you do?

A. Add Group1 to the local Administrators group.
B. Add Group1 to the Certificate Publishers group.
C. Assign the Manage CA permission to Group1.
D. Assign the Issue and Manage Certificates permission to Group1.

Answer: C

QUESTION 4
You have an enterprise subordinate certification authority (CA) configured for key archival. Three key recovery agent certificates are issued.
The CA is configured to use two recovery agents.
You need to ensure that all of the recovery agent certificates can be used to recover all new private keys.
What should you do?

A. Add a data recovery agent to the Default Domain Policy.
B. Modify the value in the Number of recovery agents to use box.
C. Revoke the current key recovery agent certificates and issue three new key recovery agent certificates.
D. Assign the Issue and Manage Certificates permission to users who have the key recovery agent certificates.

Answer: B

QUESTION 5
You have an enterprise subordinate certification authority (CA). The CA is configured to use a hardware security module.
You need to back up Active Directory Certificate Services on the CA.
Which command should you run?

A. certutil.exe -backup
B. certutil.exe -backupdb
C. certutil.exe -backupkey
D. certutil.exe -store

Answer: A

QUESTION 6
You have Active Directory Certificate Services (AD CS) deployed.
You create a custom certificate template.
You need to ensure that all of the users in the domain automatically enroll for a certificate based on the custom certificate template.
Which two actions should you perform?
(Each correct answer presents part of the solution. Choose two.)

A. In a Group Policy object (GPO), configure the autoenrollment settings.
B. In a Group Policy object (GPO), configure the Automatic Certificate Request Settings.
C. On the certificate template, assign the Read and Autoenroll permission to the Authenticated Users group.
D. On the certificate template, assign the Read, Enroll, and Autoenroll permission to the Domain Users group.

Answer: AD

QUESTION 7
You have an enterprise subordinate certification authority (CA).
You have a custom Version 3 certificate template. Users can enroll for certificates based on the custom certificate template by using the Certificates console.
The certificate template is unavailable for Web enrollment.
You need to ensure that the certificate template is available on the Web enrollment pages.
What should you do?

A. Run certutil.exe -pulse.
B. Run certutil.exe -installcert.
C. Change the certificate template to a Version 2 certificate template.
D. On the certificate template, assign the Autoenroll permission to the users.

Answer: C

QUESTION 8
You have an enterprise subordinate certification authority (CA).
You have a custom certificate template that has a key length of 1,024 bits. The template is enabled for autoenrollment. 
You increase the template key length to 2,048 bits. 
You need to ensure that all current certificate holders automatically enroll for a certificate that uses the new template. 
Which console should you use?

A. Active Directory Administrative Center  
B. Certification Authority  
C. Certificate Templates  
D. Group Policy Management

**Answer:** C

**QUESTION 9**
You have a certification authority (CA). 
The relevant servers in the domain are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Operating system</th>
<th>Server role</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Windows Server 2003</td>
<td>Enterprise root CA</td>
</tr>
<tr>
<td>Server2</td>
<td>Windows Server 2008</td>
<td>Enterprise subordinate CA</td>
</tr>
<tr>
<td>Server3</td>
<td>Windows Server 2008 R2</td>
<td>Web Server</td>
</tr>
</tbody>
</table>

You need to ensure that you can install the Active Directory Certificate Services (AD CS) Certificate Enrollment Web Service on the network. 
What should you do?

A. Upgrade Server1 to Windows Server 2008 R2.  
B. Upgrade Server2 to Windows Server 2008 R2.  
C. Raise the functional level of the domain to Windows Server 2008.  
D. Install the Windows Server 2008 R2 Active Directory Schema updates.

**Answer:** D

**QUESTION 10**
Your company has an Active Directory forest that contains multiple domain controllers. The domain controllers run Windows Server 2008. 
You need to perform an authoritative restore of a deleted organizational unit and its child objects. Which four actions should you perform in sequence? (To answer, move the appropriate four actions from the list of actions to the answer area, and arrange them in the correct order.)
QUESTION 11
Your network contains an Active Directory domain. The domain contains a group named Group1. The minimum password length for the domain is set to six characters. You need to ensure that the passwords for all users in Group1 are at least 10 characters long. All other users must be able to use passwords that are six characters long. What should you do first?

A. Run the New-ADFineGrainedPasswordPolicy cmdlet.
B. Run the Add-ADFineGrainedPasswordPolicySubject cmdlet.
C. From the Default Domain Policy, modify the password policy.
D. From the Default Domain Controller Policy, modify the password policy.

Answer: A

QUESTION 12
Your network contains an Active Directory domain. A user named User1 takes a leave of absence for one year. You need to restrict access to the User1 user account while User1 is away. What should you do?

A. From the Default Domain Policy, modify the account lockout settings.
B. From the Default Domain Controller Policy, modify the account lockout settings.
C. From the properties of the user account, modify the Account options.
D. From the properties of the user account, modify the Session settings.

Answer: C

QUESTION 13
Your network contains 10 domain controllers that run Windows 2008 Server R2. The network contains a member server that is configured to collect all of the events that occur on the domain controllers. Your need to ensure that administrators are notified when a specific event occurs on any of the domain controllers. You want to achieve the goal by using the minimum amount of effort. What should you do?

A. From Event Viewer on the member server, create a subscription.
B. From Event Viewer on each domain controller, create a subscription.
C. From Event Viewer on the member server, run the Create Basic Task Wizard.
D. From Event Viewer on each domain controller, run the Create Basic Task Wizard.

Answer: C

QUESTION 14
Your network contains an Active Directory domain controller named DC1. DC1 runs Windows Server 2008 R2. You need to defragment the Active Directory database on DC1. The solution must minimize downtime on DC1. What should you do first?

A. At the command prompt, run net stop ntds.
B. At the command prompt, run net stop netlogon.
C. Restart DC1 in Safe Mode.
D. Restart DC1 in Directory Services Restore Mode (DSRM).

Answer: A

QUESTION 15
Your network contains an Active Directory domain named contoso.com. All domain controllers and member servers run Windows Server 2008. All client computers run Windows 7. From a client computer, you create an audit policy by using the Advanced Audit Policy Configuration settings in the Default Domain Policy Group Policy object (GPO). You discover that the audit policy is not applied to the member servers. The audit policy is applied to the client computers. You need to ensure that the audit policy is applied to all member servers and all client computers. What should you do?

A. Add a WMI filter to the Default Domain Policy GPO
B. Modify the security settings of the Default Domain Policy GPO
C. Configure a startup script that runs auditpol.exe on the member servers.
D. Configure a startup script that runs auditpol.exe on the domain controllers.
QUESTION 16
Your network contains an Active Directory domain. The domain contains 1000 user accounts. You have a list that contains the mobile phone number of each user. You need to add the mobile number of each user to Active Directory. What should you do?

A. Create a file that contains the mobile phone numbers, and then run ldifde.exe
B. Create a file that contains the mobile phone numbers, and then run csvde.exe
C. From Adsiedit, select the CN=Users container, and then modify the properties of the container.
D. From Active Directory Users and Computers, select all of the users, and then modify the properties of the users.

Answer: A

QUESTION 17
Your network contains two Active Directory forests named contoso.com and nwtraders.com. A two-way forest trust exists between contoso.com and nwtraders.com. The forest trust is configured to use selective authentication. Contoso.com contains a server named Server1. Server1 contains a shared folder named Marketing. Nwtraders.com contains a global group named G_Marketing. The Change share permission and the Modify NTFS permissions for the Marketing folder are assigned to the G_Marketing group. Members of G_Marketing report that they cannot access the Marketing folder. You need to ensure that the G_Marketing members can access the folder from the network. What should you do?

A. From Windows Explorer, modify the NTFS permissions of the folder
B. From Windows Explorer, modify the share permissions of the folder
C. From Active Directory Users and Computers, modify the computer object for Server1
D. From Active Directory Users and Computers, modify the group object for G_Marketing

Answer: C

QUESTION 18
Your network contains an Active Directory domain named contoso.com. Contoso.com contains three servers. The servers are configure as shown in the following table.

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role Service</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Certification authority (CA)</td>
</tr>
<tr>
<td>Server2</td>
<td>Certificate Enrollment Web Service</td>
</tr>
<tr>
<td>Server3</td>
<td>Certificate Enrollment Policy Web Service</td>
</tr>
</tbody>
</table>

You need to ensure that users can manually enroll and renew their certificates by using the Certificate Enrollment Web Service. Which two actions should you perform? (Each corrent answer presents part of the solution. (Choose two).

A. Configure the policy module setting.
B. Configure the issuance requirements for the certificate templates.
C. Configure the Certificate Services Client - Certificate Enrollment Policy Group Policy setting.
D. Configure the delegation setting for the Certification Enrollment Web Service application pool account.

Answer: BC

QUESTION 19
Your network contains an Active Directory domain named contoso.com. Contoso.com contains a member server that runs Windows Server 2008 Standard. You need to install an enterprise subordinate certification authority (CA) that support private key archival. You must achieve this goal by using the minimum amount of administrative effort.
What do you do first?

A. Initialize the Trusted Platform Module (TPM)
B. Upgrade the member server to Windows Server 2008 R2 Standard.
C. Install the Certificate Enrollment Policy Web Service role service on the member server.
D. Run the Security Configuration Wizard (SCW) and select the Active Directory Certificate Services - Certification Authority server role template check box.

Answer: B

QUESTION 20
Your company has a main office and a branch office. You deploy a read-only domain controller (RODC) that runs Microsoft Windows Server 2008 to the branch office. You need to ensure that users at the branch office are able to log on to the domain by using the RODC. What should you do?

A. Add another RODC to the branch office.
B. Configure a new bridgehead server in the main office.
C. Decrease the replication interval for all connection objects by using the Active Directory Sites and Services console.
D. Configure the Password Replication Policy on the RODC.

Answer: D
