Exam Code: e20-350
Exam Name: networked storage-san implementation exam
Vendor: EMC
Version: DEMO
Part: A

1: Which main sets of input are captured using SAN Architect?
A. Zoning Requirements, Storage Arrays, Topologies
B. Servers and Storage Requirements, Performance, Topologies
C. Servers and Storage Requirements, Storage Arrays, Topologies
D. Servers and Storage Requirements, Storage Arrays, Device masking
Correct Answers: C

2: What is the purpose of Auto-Port Assignment in SAN Architect?
A. Virtual Fabric Creation
B. Auto matrix qualification
C. Reassign all fabric connections in a highly available fashion
D. Reassign only the connections that are NOT highly available
Correct Answers: C

3: Which tool provides a visual representation of SAN and DAS designs for SAN Architect?
A. Visio
B. Word
C. HTML
D. PowerPoint
Correct Answers: A

4: Which tasks are performed using SAN Architect?
A. Design, Model and Validate
B. Documentation, masking and Zoning lists
C. Statement of work, Project plan and Sales order
D. Part numbers, serial numbers and cable diagrams
Correct Answers: A

5: What is one of EMC’s recommendations for zoning in a B-series?
A. Hard zoning
B. Mixed zoning
C. Single HBA zoning
D. Aliases for zone members
Correct Answers: C

6: Which event causes a fabric rebuild in a B-Series fabric?
A. cfgenable
B. Hard zoning
C. Fabric Manager
D. Switch/Director removed
Correct Answers: D
7: What is a valid range of Domain IDs in interopmode for B-Series Switch/Directors?
A. 0-31
B. 1-239
C. 97-127
D. 128-239
Correct Answers: C

8: What happens when Zoning Security is enabled in Fabric Manager?
A. Zoning only per serial connection
B. No zoning changes are permitted
C. Access zoning only with the primary fibre channel switch
D. Zoning is permitted from all switches with dedicated passwords
Correct Answers: C

9: How many IP addresses are needed for installing an ED-12000B director?
A. 2
B. 4
C. 6
D. 8
Correct Answers: B

10: What is the setting for creating a serial connection to a B-Series Switch/Director?
A. 2400, parity
B. 2400, no parity
C. 9600, parity
D. 9600, no parity
Correct Answers: A

11: What is EMC's recommended maximum number of hops between two B-series Switch/Directors?
A. 2
B. 3
C. 4
D. 5
Correct Answers: B

12: Which fibre channel feature automatically determines routing in a multi-switch fabric?
A. FSPF
B. Routing
C. Spanning Tree
D. ISL Aggregation
Correct Answers: A

13: Click the Task button.
Match the methods on the right for monitoring a fabric with the protocols on the left.

Correct Answers:

14: Which type of cable is needed when connecting to a B-Series Switch/Director maintenance port using a hyper-terminal?
A. Cross over cable
B. Null Modem cable
C. 10/100 Ethernet cable
D. Pass through serial cable
Correct Answers: D

15: Which B-Series model allows non-disruptive firmware upgrades running firmware 4.1.x?
A. DS-16B
B. DS-16B2
C. DS-16B3
D. ED-12000B
Correct Answers: D
